mayfone®
For Teams

Leverage the power of Mayfone to make Teams talk properly

With **Mayfone** for Teams your business can leverage our powerful **Mayfone** infrastructure and features to provide an enhanced voice solution for your Microsoft Teams users.

Key Features

- Make and receive voice calls from within the Microsoft Teams softphone.
- Enterprise-grade voice network resilience.
- IVRs & intelligent call routing.
- Geographical numbering available in over 65 international destinations.
- Integrated call recording with secure storage.
- Optional integration with our Atmos compliance suite.
- Voicemail to email transcription.
- Generous inclusive call bundles.
- Wide range of supporting desk phones & conference devices.
- Simplified porting and provisioning carried out by our in-house UK team.

Endpoint Flexibility as Standard

Whether you are currently using **Mayfone** Communicator and have a longer-term UcaaS strategy for Microsoft Teams, or already use Teams and need a robust solution for voice, Mayflower for Teams delivers a host of benefits to your chosen unified communications endpoints.

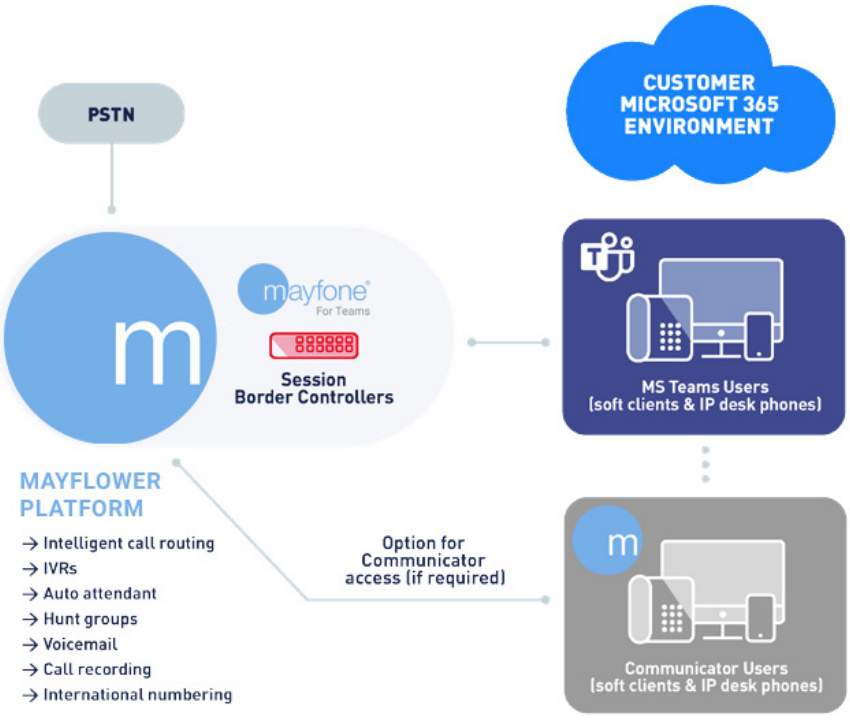
Maximising Productivity

By voice-enabling Microsoft Teams with **Mayfone** for Teams, employees continue using the soft client and interfaces they are familiar with, and as the solution is fully embedded, there's no requirement to click-out to other diallers or consoles when making a call.

Industry Leading Benefits

Mayfone for Teams is the answer to voice-enabling your Teams users in a world where the alternatives are third-party Direct Routing or Microsoft's own Calling Plans – solutions that offer basic functionality, minimal carrier resilience, and limited geographical availability.

Advanced PBX Features

In contrast, **Mayfone** for Teams delivers all the benefits of our Mayflower platform – including intelligent call routing, native call recording (with options for compliance), enhanced resilience, international numbering, generous inclusive call bundles, and UK based provisioning and support.


How it works
