WebRTC

Discover complete flexibility with the newest way to access **mayfone**

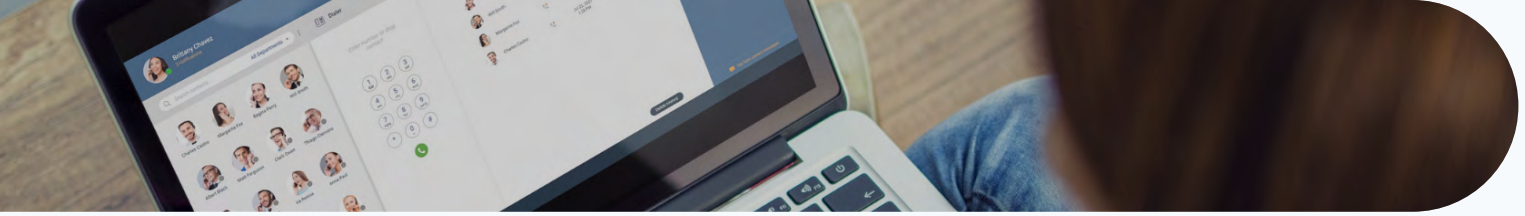

Your **mayfone Business solution** already offers a host of ways to connect, through desktop clients, mobile apps, and traditional desk phones giving you a solution fit for office, home and hybrid working environment.

But we've taken this a step further with the introduction of **mayfone WebRTC**, increasing mobility by allowing users to access **mayfone's** powerful set of features directly from their web-browser, without the need for applications.

Supported Browsers **mayfones**

WebRTC is compatible with leading browser applications, suitable for Windows, Mac, iPhone, and iPad.

UC Features

From within a single browser window, **mayfone WebRTC** allows users to access a full suite of unified communications features:

View **mayfone** directory in grid and list formats available

Instant, ad-hoc call conferencing, & pre-defined conference rooms

Make and receive calls, including click to dial and drag & drop

Voice and video meeting access to pre-arranged **mayfone** meetings

Instant messaging, with group and direct options

Unified voicemail access including download capability

Individual and group file sharing via built-in chat

Set pre-defined and custom presence status
